POSTFLOP FRAMEWORK DRILLS · PLAYER'S GUIDE COMPANION

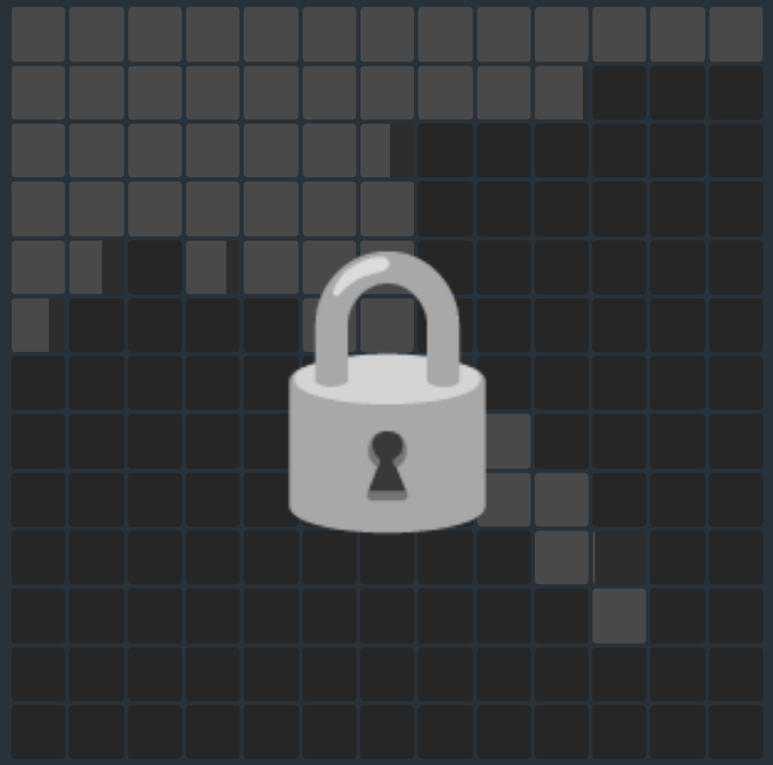

TACTICAL STACK-SIZE ADJUSTMENTS

How preflop ranges, 3-bets and postflop commitment change from deep stacks to push/fold

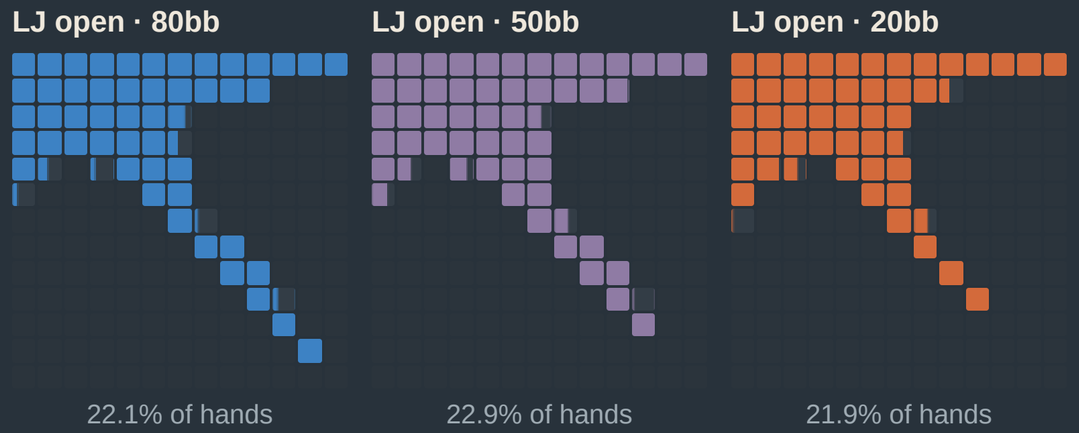

THE STATIC FALLACY VS THE DYNAMIC STRATEGY

THE STATIC FALLACY

Weaker players use one opening range at every stack depth, ignoring what happens after the flop.

THE DYNAMIC STRATEGY

Good players keep roughly the same **number** of hands but change **which** hands as the effective stack shrinks. These are your real lojack charts.

THE INVERSE VALUE SEESAW

DEEP STACKS

Suited connectors, small pairs, suited wheel aces

SHALLOW STACKS

Big offsuit cards: KJo, KTo, ATo, A9o, QJo

As stacks get **shorter**, big offsuit cards gain value: they make top pairs you can get all in with. As stacks get **deeper**, suited connectors and small pairs gain value: they make the straights, flushes and sets that win big pots.

One exception at the very short end: once you're shoving, small pairs and weak aces gain value again for their all-in equity and blockers.

WHAT YOUR HANDS ARE FOR

STACK DEPTH

DEEP — SHALLOW

DEEP: MAKING THE NUTS

T9 suited

150bb: T9s is excellent because it makes straights and flushes that can win a 300bb pot. One pair rarely can.

SHALLOW: STRONG TOP PAIRS

KQ offsuit

40–50bb: KQo on K-8-4 is a strong hand. With standard bets it can get all the money in by the river (SPR about 5 at 40bb). In a 3-bet pot at 50bb it is a clear stack-off.

Lojack open · 80bb · your chart

OPENING RANGES: THE DEEP BLUEPRINT

STACK DEPTH

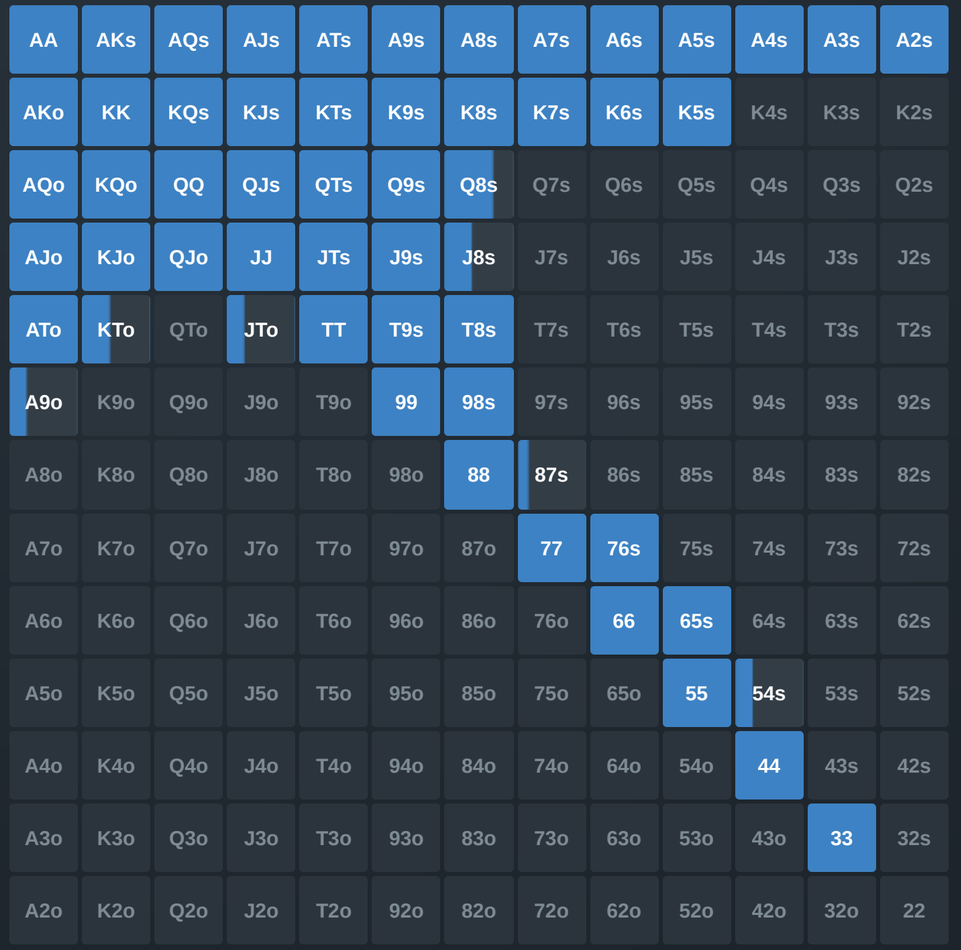

DEEP — SHALLOW

How to read the grid

Pairs on the diagonal, **suited** hands above it, **offsuit** hands below it. Part-filled cells are opened only some of the time.

The offsuit desert

Only 7 offsuit hands are opened at least half the time: AKo, AQo, KQo, AJo, KJo, QJo, ATo. KTo and A9o are mixed in rarely.

The suited bias

Every suited ace, suited kings down to K5s, suited connectors down to 65s and small pairs 33+. These hands set up straights, flushes and sets.

22.1%

of hands

Your charts start at 80bb. At 150bb (the webinar's example) the same idea is stronger still: even fewer offsuit hands and more small pairs and suited connectors.

Lojack open · 80bb → 20bb · your charts

THE SHALLOW SHIFT: SAME SIZE, DIFFERENT HANDS

STACK DEPTH

DEEP — SHALLOW

Folded: playability

30 combos removed.

K6s, K5s, JTo, 76s, 65s, 54s, 44, 33. Small pairs, small suited connectors and weak suited kings lose their implied odds.

In both · Removed · Added

AA	AKs	AQs	AJs	ATs	A9s	A8s	A7s	A6s	A5s	A4s	A3s	A2s

Added: top-pair power

27 combos added.

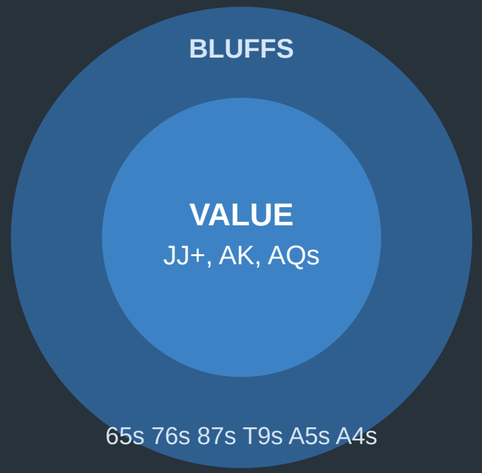

Q8s, J8s, KTo, QTo, A9o, 87s. Offsuit Broadways and offsuit aces make top pairs you can stack off with.

22.1% at 80bb ≈ **21.9%** at 20bb. Not tighter: **different**. At 50bb the shift is part-way: 33 out; J8s, JTo, A9o, 87s in.

3-BETTING: THE DEEP-STACK STRATEGY

STACK DEPTH

DEEP — SHALLOW

Webinar example: about 44 value combos and 36 bluff combos, so the range is balanced.

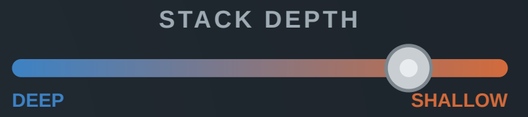

WHY SUITED CONNECTORS AND WHEEL ACES?

If you 3-bet only JJ+ and AK, a 5-6-7 flop misses you completely and opponents can attack it. Bluffs like 65s, 76s and A5s/A4s make straights, two pairs and wheels on those boards, so you're **much harder to exploit** on low, connected flops.

Your 80bb BTN vs LJ chart agrees: it 3-bets A2s 95%, 65s 75%, 87s 60% and T9s 50% of the time as bluffs.

3-BETTING: THE SHALLOW-STACK STRATEGY

THE BLOCKER SHIELD

At 50bb, opponents 4-bet **jam** over your 3-bet. An ace in your hand cuts their AA, AK and AQ combos; a king cuts KK and AK.

THE SWAP

~~76s~~ ~~65s~~ → **ATo · AJo · KJo KTo · A9s–A6s**

Small suited connectors can't call a jam and don't block anything. Offsuit Broadways block the jams and flop top pairs that are easy to play when called.

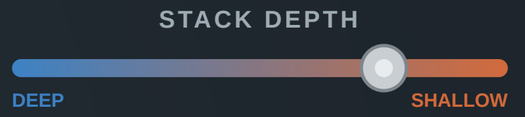

YOUR 50BB CHART

HAND	3-BET AT 80BB	AT 50BB
ATo	80%	85%
AQo	35%	60%
A5s	30%	85%
KJo	35%	40%
QJo	30%	40%
A2s	95%	0%
65s	75%	10%

BTN vs LJ open. Offsuit Broadways rise; A2s and 65s drop out. A5s stays: it blocks aces and still makes wheels.

Button vs a middle-position open at 50bb

THE 3-BET BLUFF PARADOX: KTO VS KQO

Middle position opens · you're on the button

3-bet **KTo**

↓

They fold **better** hands: KJ, KQ, and AT

↓

Win: you fold out hands with about 70% equity against you

3-bet **KQo**

↓

They fold the hands you **dominate** (KJ, KT) and continue with hands that crush you (AK, AQ, big pairs)

↓

Loss: you've removed the hands you wanted to play against

Flat KQo to keep dominated hands in the pot. 3-bet KTo to fold out better hands.

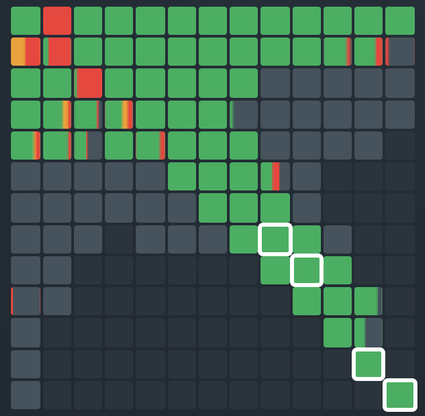

Button opens · big blind 3-bets · button decides · your charts

CALLING A 3-BET: WHERE SMALL PAIRS AND SUITED CONNECTORS EARN THEIR KEEP

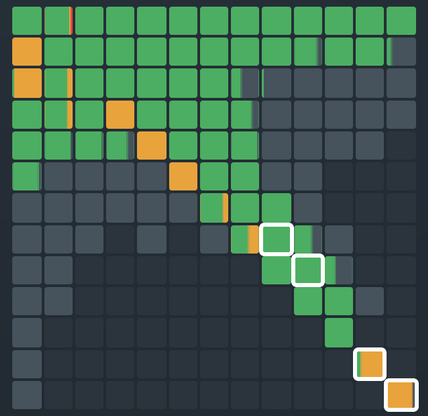

STACK DEPTH

DEEP — SHALLOW

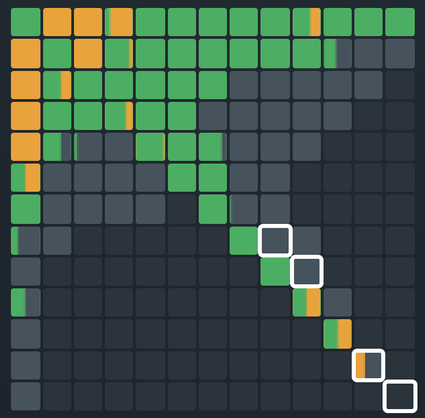

80bb

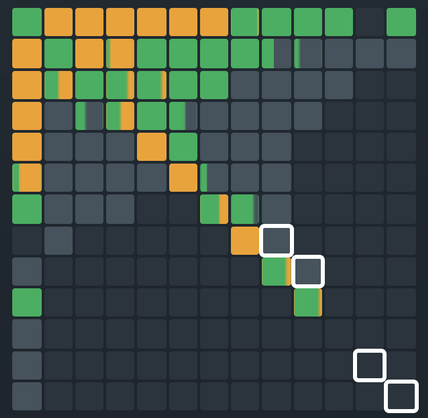

50bb

30bb

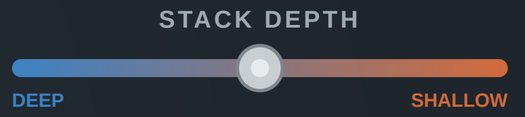

20bb

Call · 4-bet jam · 4-bet · Fold · 22, 33, 65s, 76s

HAND	80BB	50BB	30BB	20BB
22	Call	Jam 90% · Fold 10%	Not opened	Open-jams instead
33	Call	Call 20% · Jam 80%	Jam 35% · Fold 65%	Open-jams instead
65s	Call	Call	Fold	Fold
76s	Call	Call	Fold	Fold
Behind ÷ call	**9×**	**6×**	**4×**	**3×**

THE ENGINE OF PLAYABILITY: STACK-TO-POT RATIO

SPR = effective stack behind ÷ pot on the flop

SPR 13+	SPR 7–13	SPR 4–7	SPR 2–4	SPR 0–2
Nut hands only	**Two pair or sets**	**Top pair: be careful**	**Top pair, overpair**	**Any pair, good draw**
Sets, straights, flushes	One pair = pot control	Good kicker can play a big pot	Plan to get it in	Already committed

13 100bb single-raised **8** 50bb single-raised **4.5** 30bb single-raised · 100bb 3-bet pot **3.3** 20bb single-raised **2.2** 50bb 3-bet pot

Each band shows the weakest hand usually strong enough to stack off (rough guide). Typical SPRs from your charts and solves, with a 1bb big-blind ante.

40bb deep · KQo vs a button caller · flop K-8-4

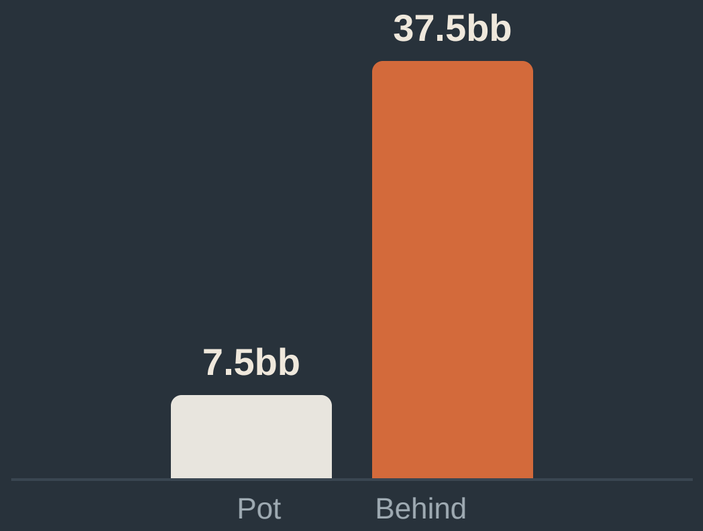

THE COMMITMENT ZONE: SPR 5 OR LESS

STACK DEPTH

DEEP — SHALLOW

FLOP

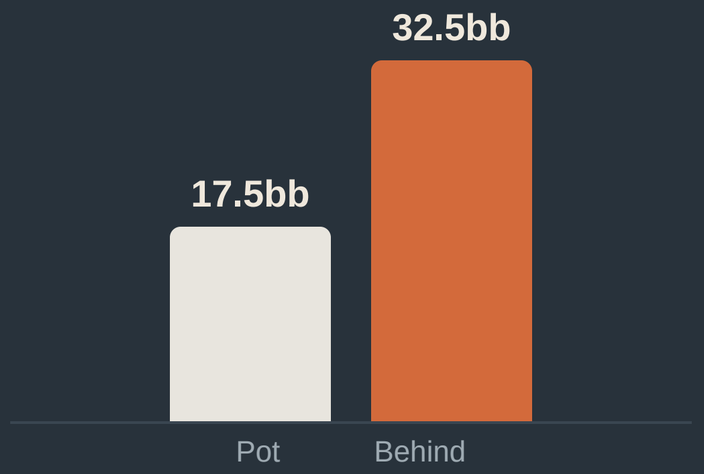

After a 2.5bb open and call

Flop SPR = 5

TURN

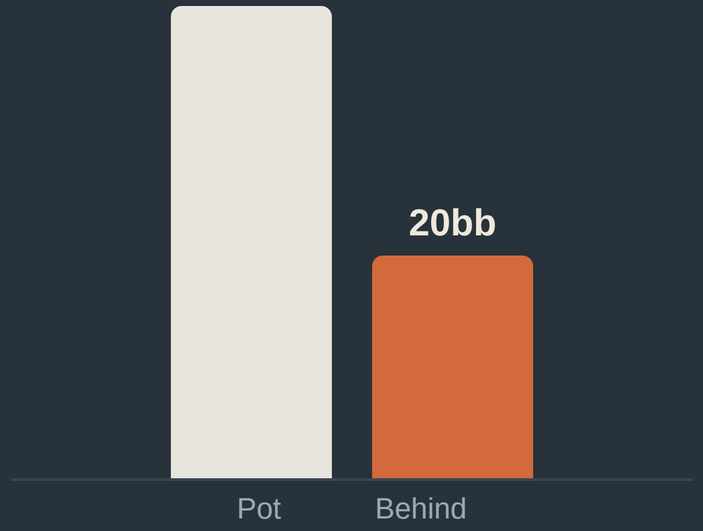

After you bet 5bb, called

Turn SPR ≈ 1.9

RIVER

After you bet 42.5bb, called

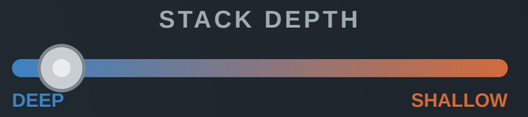

River SPR ≈ 0.5

With 20bb left and 42.5bb in the pot, a half-pot shove gets it all in. Normal-sized bets commit a 40bb stack with one strong top pair. At this depth, stronger hands (AQ, sets, two pairs) usually raise earlier, so KQ is near the top of what's left.

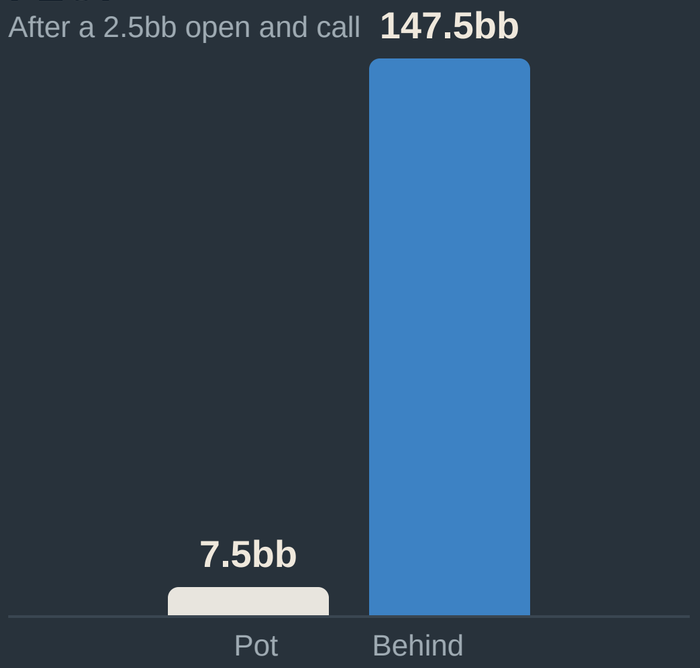

150bb deep · same hand, same bets

THE MANEUVER ZONE: SPR ABOVE 5

FLOP

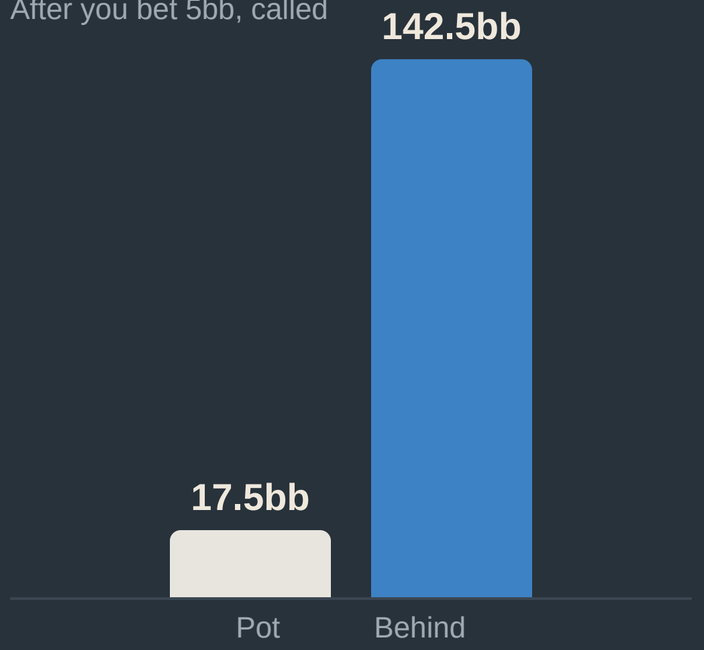

After a 2.5bb open and call

Flop SPR ≈ 20

TURN

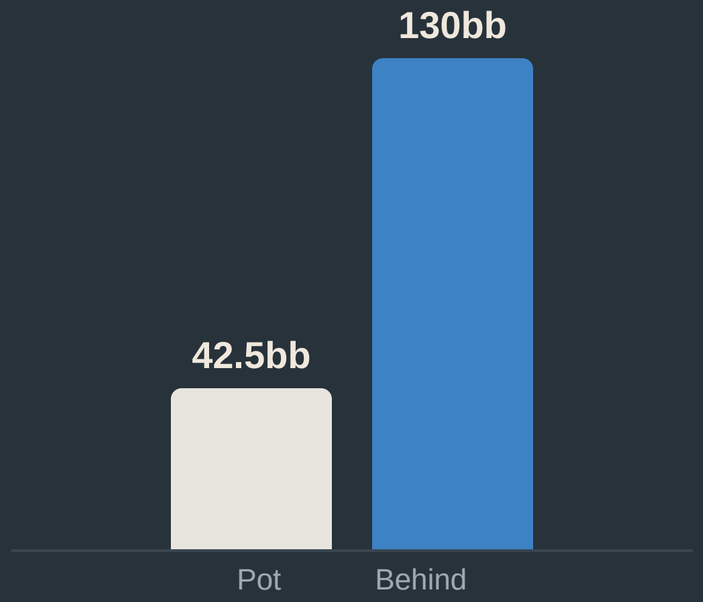

After you bet 5bb, called

Turn SPR ≈ 8

RIVER

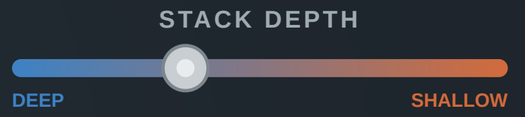

After you bet 12.5bb, called

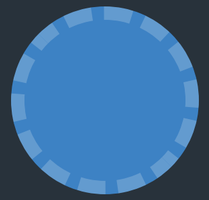

River SPR ≈ 3

Same bets, but 130bb are still behind on the river. You can't get stacks in without large overbets, and opponents have the implied odds to float and draw. Their calling range includes AQ, sets, two pairs and straights that would have raised earlier when shallow, so top pair is vulnerable.

THE MULTIWAY MODIFIER

Heads-up

150bb · pot 7.5bb · SPR ≈ 20

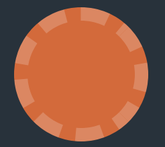

→

Open + 3 callers

3bb × 4 + blinds and ante ≈ 13.5bb pot

→

Multiway

SPR ≈ 11: plays shallower

The math

More players in the pot means a bigger pot for the same stacks, so a lower SPR, even at 150bb.

The shift

Strong top pairs and overpairs gain value, but so do opponents' two pairs and sets: with more players, someone has hit more often. Bluff less.

Example

Deep, with two early limpers, **over-limp** 44 behind them rather than isolate: it hates most flops and wants a cheap set. Don't open-limp from early position.

EFFECTIVE STACKS AND OPPONENT TENDENCIES

THE EFFECTIVE STACK RULE

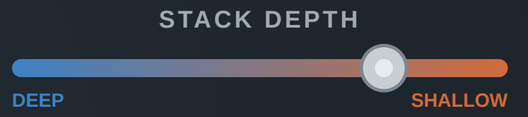

100bb vs 25bb = 25bb

The effective stack is the smaller stack **in the hand**: it's the most you can win or lose. With 100bb against a 25bb player, play a 25bb strategy against them. Against another 100bb player, you're deep again. Use the stacks of the players who can enter the pot, not the table average.

ADJUST TO OPPONENTS

They fold too much to 3-bets	3-bet more blocker bluffs
They call 3-bets with weak hands	Drop the bluffs; 3-bet more value hands
They 4-bet jam only premiums	Fold AQ, AJs, KQs to the jam
They open too tight	3-bet less
They open too wide	3-bet and re-jam more

NEW: THE RE-JAM ZONE (20–35BB)

3-BETS BECOME ALL-INS

BB VS BTN OPEN	3-BET	RE-JAM	CALL
80bb	15.8%	0%	65.2%
30bb	6.4%	11.1%	59.9%
20bb	6.6%	13.7%	65.7%
12bb	0%	20.9%	40.5%

From your charts. A small 3-bet at 30bb already commits a third of your stack, so the all-in replaces it.

WHAT CHANGES

- **Open smaller** (2–2.3bb). The BTN tightens from 54% (80bb) to 45% (30bb) to 36% (20bb) because the blinds re-jam.
- **Re-jam with blockers** and hands that do well all in: Ax, KQ, KJ, pairs.
- **Call jams tighter than you'd jam** (the gap concept): you need a hand ahead of their range.
- **Postflop**: SPR 3–4.5 makes top pair good kicker a stack-off; bet small and plan to get it in.

NEW: PUSH OR FOLD (15BB AND UNDER)

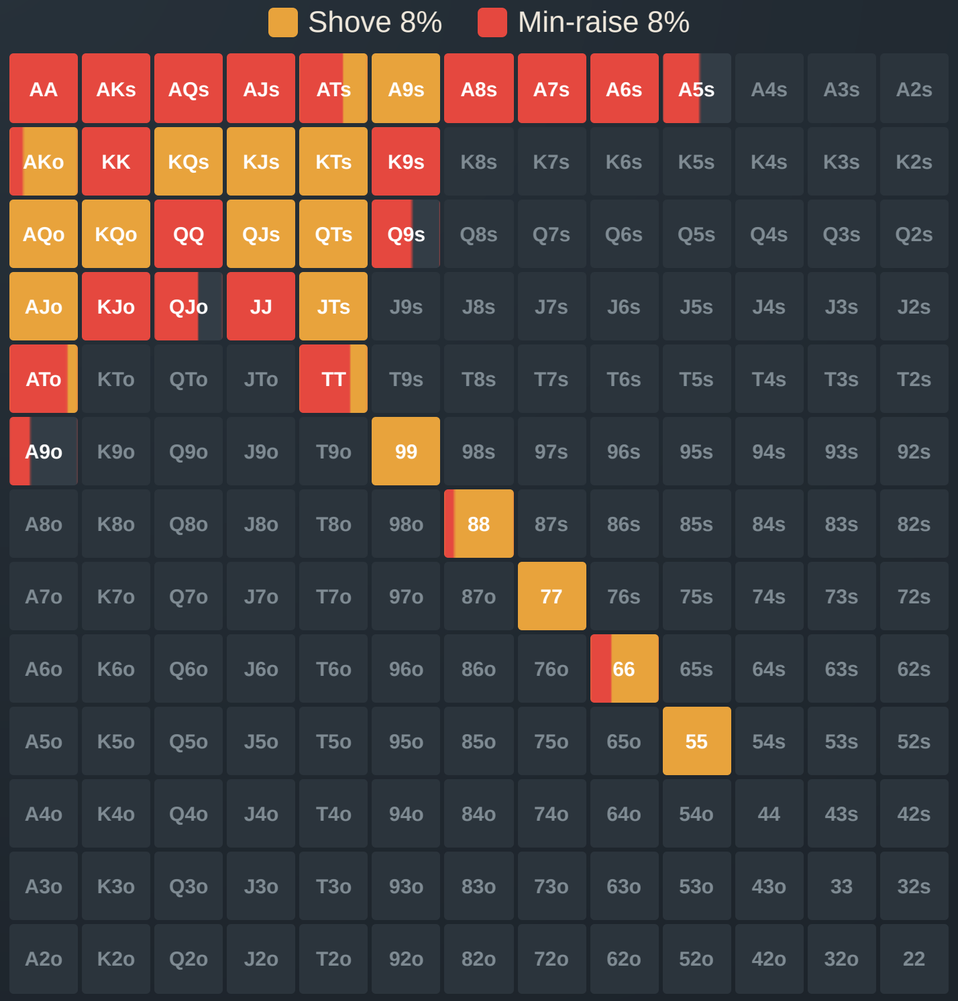

STACK DEPTH

DEEP — SHALLOW

Two-way opens at 12bb

Min-raise the best hands (AA–TT, the best suited aces) so they get action, plus a few that can fold.

Shove the middle: small and medium pairs, offsuit aces and Broadways. They win most when everyone folds and hate being re-jammed.

UTG open · 12bb · your chart

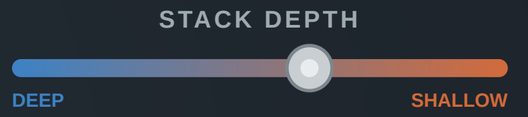

Facing a shove

At 12bb the BB calls a BTN shove with about 28% of hands and an SB shove with about 40%.

Under 10bb

Shove or fold. Each orbit costs about 2.5bb, so shove before you're too short to make anyone fold.

NEW: THE BUBBLE AND RISK PREMIUM

EXTRA EQUITY NEEDED TO CALL AN ALL-IN

You / they	Short	Medium	Big
Short	Moderate	High	+9–15%
Medium	Low	Very high	Very high
Big	Very low	Moderate	+18–35%

Rough guide (numbers from Jonathan Little; other cells follow the same logic). Near the money, chips you lose cost more than chips you win are worth.

HOW IT PLAYS

- **Example:** 10bb in the BB vs a 40bb SB shove with any two: you need about 56% (44+, A6s+, A8o+, K6s+, K8o+, Q8s+, JTs), not 43%.
- **Big stack:** open, 3-bet and defend wider; medium stacks can't fight back.
- **Medium stack:** avoid the big stacks; pressure other medium and short stacks.
- **Short stack:** shove, don't min-raise and call off.
- **Your charts are chip EV:** tighten calls by the risk premium on the bubble.

THE MASTER STACK-DEPTH MATRIX

	100bb+ Maneuver	**40–60bb** Top pair	**20–35bb** Re-jam	**15bb and under** Push/fold
Single-raised pot SPR	13+	About 6–8	About 3–4.5	About 2 (after a min-raise)
Main priority	Making the nuts; pot control with one pair	Strong top pairs	High cards, blockers, fold equity	All-in equity
Opens gain	Small pairs, suited connectors, suited aces	KJo, KTo, JTo, ATo, A9o	Same %, smaller sizes; BTN tightens	Shoves: pairs, Ax, Broadways
3-bet bluffs	65s, 76s, 87s, T9s, A5s, A4s	ATo, AJo, KJo, KTo, A9s–A6s	Re-jams with blockers (Ax, Kx)	Re-jam or fold
Top pair	Pot control; vulnerable to floats	Strong; stacks off in 3-bet pots	Usually a stack-off	Get it in

Numbers come from your PokerCoaching charts (80bb is the deepest they go) and the solved spots in the drills. Ideas also from PokerCoaching videos by Matt Affleck (stack depth) and Jonathan Little (bubble). Full details: the Stack Depth & Bubble Strategy player's guide.
