Preflop raise sizing by stack depth

How big to open, 3-bet and 4-bet at 80, 50, 30, 20 and 12bb (8-max, 1bb big-blind ante). The bars show how often your charts make that raise all in rather than a smaller raise.

STACK	OPEN (FOLDED TO YOU)	3-BET IN POSITION	3-BET FROM THE BLINDS	4-BET	WHY
80bb	**2.3bb** SB vs BB: 3.5bb	3× the open (about 7bb) 0% all in	4× (about 9–9.5bb); vs an SB open, about 3× (10–11bb) 0% all in	About 2.2× the 3-bet in position, 2.5× out of position (about 16–22bb) 11% all in	Deep enough to 3-bet and 4-bet small. Stacks go in later, after the flop. Called 3-bet SPR: about 4.4 in position, 3.6 from the BB
50bb	**2.2bb** SB vs BB: 3.5bb	3× (6.6bb) 0% all in	4× (8.8bb); vs an SB open, about 3× (10.5bb) 1% all in	All in, or a small 4-bet of about 2.2× (15bb) that commits you anyway 49% all in	The sizes the 50bb solver spots use. A called 3-bet leaves SPR under 3: top pair is usually good enough to get it in. Called 3-bet SPR: about 2.8 in position, 2.2 from the BB
30bb	**2.3bb** SB vs BB: 3.2bb	About 2.5× (5.5–6bb), or all in 11% all in	About 3× (7bb), or all in 46% all in	Always all in 100% all in	A small 3-bet already commits about a fifth of your stack, so many 3-bets from the blinds are simply all in. Called 3-bet SPR: about 1.7 in position, 1.5 from the BB
20bb	**2bb (min-raise); some all-in opens late** SB vs BB: 3bb 8% of opens are all in	Almost always all in 85% all in	Mostly all in; a few small 3-bets (about 5bb) from the big blind 82% all in	Always all in 100% all in	Re-jam territory. A non-all-in 3-bet leaves too little behind to fold.
12bb	**Min-raise (2bb) or all in** SB vs BB: Limp or all in 66% of opens are all in	All in 100% all in	All in 100% all in	n/a n/a	Push/fold: every re-raise is all in. See the 12bb push/fold charts.

All-in share Smaller raise

Adjustments

- **Limpers:** add 1bb to your open for each limper.
- **Squeeze** (open plus callers): your normal 3-bet plus one open-size for each caller. At 30bb and below, squeeze all in.
- **Out of position, go bigger:** 3-bet about 4× from the blinds vs 3× in position, so the caller pays more to play the hand with position.
- **Short stack behind you:** at 20–25bb, prefer a min-raise you can fold to a re-jam, or open-jam, over a big open you are committed to.
- **Effective stack:** size for the smaller stack in the hand, not your own.

Why sizes shrink as stacks shrink

- Opens stay about 2–2.3bb at every depth; what changes is the 3-bet.
- A 3-bet is a share of your stack: 7bb is 9% of 80bb but 23% of 30bb. Once a 3-bet costs a fifth of your stack, you can't fold to a jam, so the solver jams instead.
- That is why the all-in share jumps from about 0% at 50bb to about a third at 30bb and most 3-bets at 20bb.
- 4-bets go all in from about 50bb: a 4-bet to 15bb leaves too little behind to fold.

Opens, SB sizes and all-in shares: your PokerCoaching charts. Your charts don't list 3-bet and 4-bet sizes, so the bb amounts are standard sizes (the 50bb solver spots use 6.6bb in position and 8.8bb from the blinds).
