When to raise on the flop and turn

From every solved spot on the site (13 flop spots × 30 flops, plus 79 turns in BTN vs BB). "Raise" includes check-raises. Percentages are how often the solver raises when facing a bet, weighted by how often each hand gets there.

20%
BB check-raises a ⅓-pot c-bet (50bb, vs UTG–BTN)

9%
BB check-raises a ¾-pot c-bet

16%
In-position caller raises a ⅓-pot c-bet (BB vs SB, BTN vs CO)

16%
Caller raises in 3-bet pots (low SPR)

15%
Preflop raiser check-raises out of position

35%
Preflop raiser raises a small donk lead (leads are rare and capped)

13%
BB check-raises a ⅓-pot turn bet (6% vs ¾, 3% vs an overbet)

3×
Raise size: about 3× the bet on both streets (⅓ pot → raise to about a full pot)

Rules of thumb

1. **Raise small bets, call big ones.** Against ⅓ pot the BB check-raises about 20%; against ¾ pot only about 9%. A big bet already gets folds, and it means the bettor holds more strong hands.
2. **Out of position, raise; in position, call.** Flush draws check-raise 29% out of position but raise only 6% in position. In position you see every turn and river for the price of a call.
3. **Raise with the top and with strong draws; call with the middle.** Two pair or better raises 67%, open-enders 30%, but top pair with a weak kicker raises only 14% and weak pairs 12%. Middle hands beat bluffs but hate a re-raise.
4. **Raise more on boards that help the caller.** Low and paired boards, where the big blind holds more sets, two pairs and straights.
5. **Shorter stacks: raise-or-fold with top pair.** At 20bb top pair with a good kicker check-raises 65% (vs 50% at 50bb): a raise is close to all in, so get it in now.
6. **On the turn, raise less and bluff less.** With one card to come, draws are worth less: the BB check-raises the turn about half as often as the flop, mostly with two pair or better.

Which hands the big blind check-raises (flop, 50bb, vs UTG/HJ/CO/BTN c-bets)

HAND	RAISE	CALL	FOLD	
Sets, two pair, straights, flushes	**67%**	33%	0%	
Overpairs	**52%**	47%	1%	
Top pair, J+ kicker	**38%**	61%	0%	
Combo draws	**37%**	62%	0%	
Open-ended straight draws	**30%**	61%	9%	
Flush draws	**29%**	55%	16%	
Gutshots	**22%**	40%	38%	
Pair + strong draw	**17%**	82%	0%	
Top pair, weak kicker	**14%**	85%	1%	
Middle, bottom and under pairs	**12%**	67%	21%	
Ace high (AT+)	**8%**	54%	38%	
Backdoor draws only	**13%**	12%	76%	
Air (nothing)	**2%**	4%	95%	

Raise Call Fold

On paired boards, "middle pairs" include hands like 4x on 9-9-4, which check-raise about half the time; elsewhere weak pairs raise under 10%.

Which boards: BB check-raise vs ⅓ pot

FLOP	RAISE
8-high or lower	**24%**
Paired	**27%**
9 to J high	**20%**
Monotone	**17%**
Q-high or higher	**16%**

Most (BTN vs BB): 9♠9♥4♥ 32% · 7♦7♣2♠ 31% · 6♠4♦3♣ 29% · K♠K♦4♥ 27%

Least: A♥K♦5♣ 11% · A♠J♥9♠ 12% · A♠Q♠6♦ 13% · K♠J♠8♠ 14%

Ace- and king-high boards hit the raiser's range (AK, AQ, KQ, big pairs). Low and paired boards hit the big blind's suited connectors, small pairs and trips.

Stack depth (BTN vs BB, check-raise)

HAND	50BB	30BB	20BB
Sets, two pair, straights, flushes	69%	49%	32%
Top pair, J+ kicker	50%	65%	65%
Top pair, weak kicker	17%	35%	50%
Flush draws	27%	27%	20%
Open-ended straight draws	30%	20%	15%
Gutshots	21%	15%	11%

Shallow, one-pair hands turn into raises: a check-raise puts you close to all in, so you take the money now. Draws and gutshots raise less, because a bluff-raise can't fold anyone out with so little behind. Sets and two pair raise less too: the stack goes in later anyway, so they let the button keep betting.

3-bet pots (caller, 50bb, SPR about 2–3)

HAND	RAISE	CALL	FOLD
Sets, two pair, straights, flushes	**22%**	76%	2%
Overpairs	**33%**	61%	6%
Top pair, J+ kicker	**44%**	49%	7%
Top pair, weak kicker	**32%**	64%	4%
Combo draws	**51%**	36%	13%
Pair + strong draw	**42%**	48%	11%
Flush draws	**39%**	53%	9%
Open-ended straight draws	**19%**	66%	15%
Middle, bottom and under pairs	**14%**	55%	31%
Ace high (AT+)	**13%**	53%	34%

With so little behind, top pair and good draws raise much more (top pair, good kicker 44%). The stack goes in on the flop, so raising gets your equity in before a scary turn. Sets and two pair often just call to keep bluffs in.

Turn check-raises (BTN vs BB, ⅓ c-bet called)

HAND	RAISE	CALL	FOLD
Sets, two pair, straights, flushes	**16%**	69%	15%
Top pair, J+ kicker	**47%**	46%	6%
Combo draws	**43%**	42%	15%
Flush draws	**23%**	53%	24%
Open-ended straight draws	**15%**	17%	68%
Top pair, weak kicker	**11%**	87%	3%
Gutshots	**8%**	15%	77%
Middle, bottom and under pairs	**2%**	55%	43%
Ace high (AT+)	**1%**	48%	51%
Air (nothing)	**2%**	11%	88%

Two pair or better makes up nearly half of all turn check-raises. Weak pairs and ace high almost never raise the turn. Turns that add straight draws or overcards get slightly more raises; turns that pair the board get the fewest.

Solver: postflop-solver, 50/30/20bb, ⅓- and ¾-pot c-bets (turn: ⅓, ¾, 125%), raises of about 3×. Hand groups follow the solver drill's hand labels.
